

Remodeling?

HEAT IT WITH

HEATIZON
SYSTEMS

Heatizon Systems radiant heating and snow melting products are the perfect solution to remodeling related challenges. Because we've been in business since 1996, Heatizon Systems understands what buyers of its fine line of products want:

Heatizon Systems Products are perfect for Radiant Heating in . . .

Selection · Heatizon Systems has solutions to fit virtually all circumstances.

ROOM ADDITIONS & SUNROOMS

Because Heatizon Systems products are so versatile, they may

Quality · Heatizon Systems builds products to last and backs them with the longest, no gimmick, warranty in the industry.

be installed in concrete, directly under any floor covering or even in the joist space when the floor coverings are already in place. And don't forget the benefit of healthy radiant heat without allergy irritating dust and pollens.

Reparability · Floorizwarm, Tuff Cable and ZMesh heating elements are all easy to repair in the event they are damaged during the construction process.

Performance · Heatizon Systems products have been serving customers since 1979.

Maintenance Free · Heatizon Systems products do not require routine maintenance since they have no moving parts, no filters to change, and no pressure tanks to re-certify.

KITCHENS AND BATHROOMS

Cozy and comfortable, Heatizon Systems products deliver the warmth of the sun to floors, counter and table tops and all other objects and occupants in the room. Tile, marble and hardwood floors become warm and inviting. Radiant products under kitchen and bathroom floor surfaces deliver consistent and even heat, with no cold spots or drafty vents

Efficient · All Heatizon Systems products are 100 percent efficient.

Made in America · With only the exception of Heatwave, all Heatizon Systems products are proudly made in the United States of America.

Ease of Installation · Heatizon Systems has Installation Manuals, Installation DVDs and plenty of Technical Support available to help ensure customer satisfaction.

Economical · Heatizon Systems products do not consume floor space and do not require special framing, additional load management, fresh air venting, exhaust venting.

BASEMENTS

Heatizon Systems heating elements, ZMesh and Tuff Cable, are both simple to install. Unlike hydronic tubing which can raise the level of the basement subfloor by four inches or more, Heatizon heating elements are thin, flexible and extremely accommodating, requiring very little or no floor buildup to install under the floor covering.

Heatizon products are a perfect match for a homeowner who wants to avoid complicated and often messy looking ducting and framing for forced air systems.

ROOF DEICING AND SNOW MELT

Heatizon's Radiant Roof Snow Melt and Deicing system is installed under the roof covering for aesthetically pleasing and permanent solutions to winter weather. Heatizon Systems products go under the roof covering material rather than on top of it. Now, there is no need to pierce the roof covering to install anchors or clips to eliminate icicles, ice dams, and snow build up. Heatizon Systems patented versatile roof deicing systems can be installed under any roof covering material including metal, composite and asphalt, fiberglass, membrane, shake and others.

SNOW MELTING

Eliminate chemicals, shovels and snow plows by installing a Heatizon Snow Melting System in driveways, walkways, stairs, and ramps. Because they are designed to be fully automated, they can be programmed to turn on automatically

when snow is falling, and turn off when the surface is dry.

RETROFIT

Heatizon products can be retrofit into existing concrete or asphalt for snow melting solutions, or it can be retrofit into joist spaces in an unfinished area to gently warm the floor above it.
