<mailto:sales@powerplantsupplyco.com>

Heated Residential Heated Snow Melting Mats will prevent snow and ice accumulation on walkways and stairs around your home. Made of customized thermoplastic materials, the mats are portable and can be left outside for the entire winter season. The mats will generate heat to melt snow at a rate of 2" per hour leaving your pathway to the home clean and clear. The Residential Heated Walkway Mat and Heated Stair Mat can be used independently or interconnected another to create a continuous system of snow melting mats. With the mats' built in watertight connector cables, you can Mix and Match walkway and stair mats to create your perfect snow melting solution - all on a single plug!

Each Heated Walkway Mat and Heated Stair Mat comes with its own built in watertight connector cables. A customer can use the watertight connector cables to connect the mats to other residential mats or to a control unit. Every group of Residential Heated Mats requires a GFCI (Ground Fault Circuit Interrupter) control unit to connect the system to an electrical outlet. A customer can connect up to 5 walkway mats, 15 stair mats or a combination thereof (up to 15 amps) on a single control unit.

No Slip Residential Heated Stair Mat
